# STAR MT – increase your presence on the world stage

## Your style, your wording – your benefit

We live in a globalised world where the need for translation is constantly growing, but human translators alone can no longer keep up with such high demand. The STAR MT machine translation system provides an excellent additional resource for your company. STAR MT uses the languages and documents that you already have to generate real added value – with your house style and phrasing, with the system you use in-house, without exposing them to online providers who lack transparency.

## STAR MT – translation integration

Thanks to the use of flexible modules and configurable interfaces, STAR MT can be integrated into any scenario or process where translation is needed:

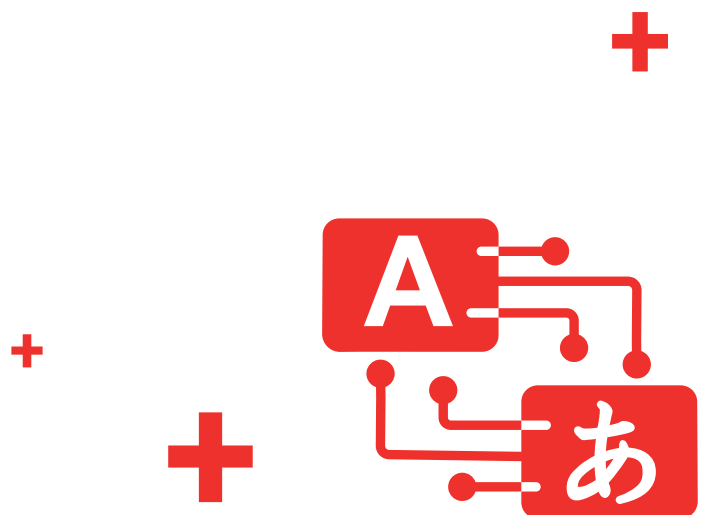

- Rough translations in real time with the STAR MT Translate web application
- Translations in Word and Outlook via the Office Connector
- Translations on the go with the STAR MT app for your tablet or smartphone
- In workshop portals or helpdesk systems and other third-party applications
- Assists professional translators working in their usual translation memory systems

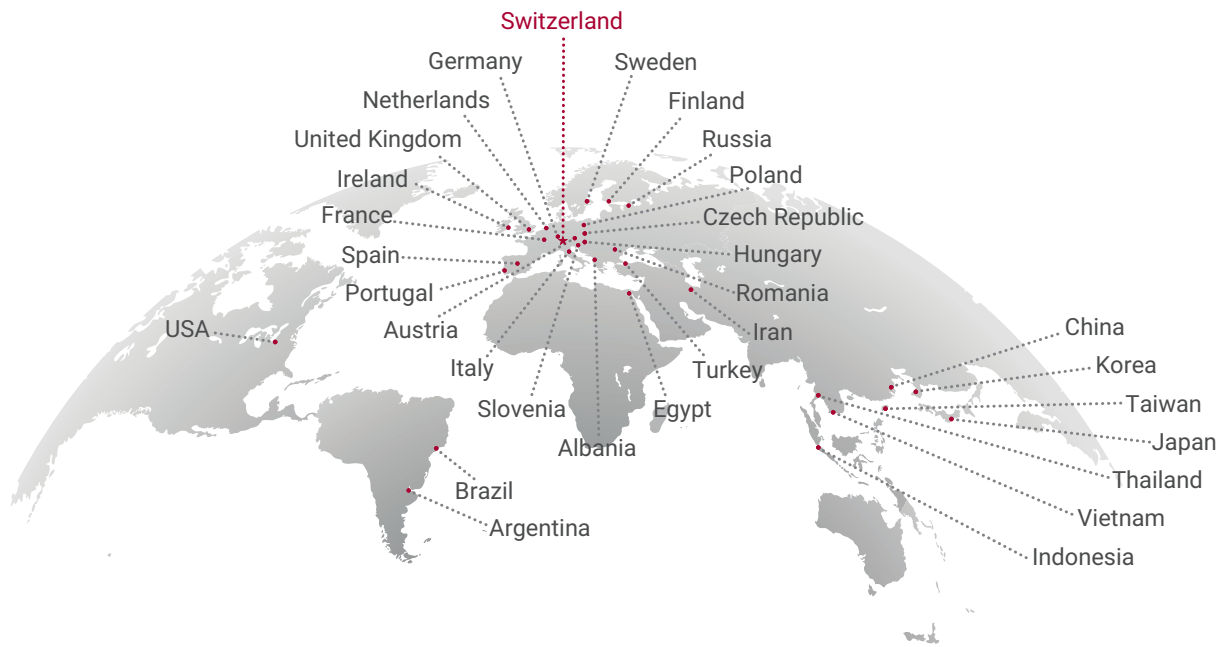

## Our experience – your results

To make sure your MT engine receives the most effective training for your translation tasks, we bring out the best in your data. When you use STAR MT, you benefit from STAR's 30 years of experience in intelligent language processes: Extracting text and using terminology from a wide range of file formats (e.g. DTP, HTML, XML, MS Office, resource files) is part of our daily routine – and we can do the same for your machine translation too.

## The benefits for you

- Your house style and wording, in all the languages you need
- Rough translations of chunks of text or entire documents in next to no time with the STAR MT Translate browser solution
- An additional resource for professional translators and post-editors in any format
- Company information is kept confidential thanks to the exclusive use of your own personal MT engine
